EchoPod™ Superior Level Measurement

Because every drop counts...

What is an EchoPod?

EchoPod™ is an integrated control automation solution that provides the only non-contact level measurement, switch and control solution. Designed to meet the cost, function and size requirements of small tank applications

How Does It Benefit Me?

Created for small tank applications

- Compact design allows for installation in applications with limited mounting options and space
- Miniture 2" dead band allows for maximum fill
- Multi-function capabilities eliminated additional components

Non-contact benefits in a small package

- Higher accuracy with no moving parts
- Measures dirty, sticky and corrosive media without affecting product performance
- Advanced Digital Signal Processing (DSP) provides advanced surface imaging in applications with obstacles in the beam width

Low cost of ownership

- Economical to purchase and install
- A single unit can provide switch, control and measurement capabilities simultaneously or individually, depending on your application
- No moving or exposed parts, virtually maintenance free

Where Can I Use It?

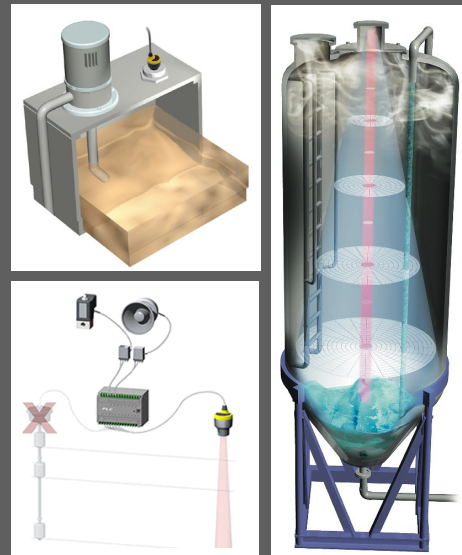

EchoPod's design and performance capabilities position it well for applications focused on control or process automation in machines, tools or skids:

- Industrial water treatment / make-up
- Wastewater management / processing
- Chemical feed and mini-bulk storage
- Control automation regarding auto fill / empty, batching, mixing or dispensing

Potential Applications

- Water & waste water
 - Process Water
 - Remediation
 - Neutralization
 - Health Care
 - Pharmaceutical Laboratory
 - Disinfecting
 - Dialysis
 - Food & beverage
 - Bio-Tech
 - Semi-conductor
 - Lubricants
- Swimming pools
 - Water Parks
 - Paints
 - Rubber
 - Agriculture
 - HVAC
 - Cleaning
 - Marine
 - Mining
 - Chemical
 - Electric power
 - Pulp & paper

EchoPod Ultrasonic Level Sensor Used In Florida's Showcase Green Envirohome

Promoted on FOX News as the "Greenest House in the World," Florida's Showcase Green Envirohome (FSGE™) has selected Flow Line Options' EchoPod for its Grey-water Reuse System.

"We chose Flow Line Options' EchoPod for a number of reasons," said Nonnie Chrystal, project manager for FSGE. She further explained that EchoPod was ideal for the project based on its great economic value, innovative capabilities, and its unique ability to detect level with only a 2 inch deadband.
